

The logo for JSD electronics features the letters 'JSD' in a bold, dark green font. The letters are filled with a pattern of green circuit traces and small yellow circular components, resembling a printed circuit board. Below the letters, the word 'electronics' is written in a dark grey, sans-serif font.

JSD electronics Company Profile

About Company

JSD Electronic is a leading technology company connecting billions of people, devices and systems. We have driven business transformation by harnessing the power of connectivity. We design ,Integrate and deliver next-gen technology products and solutions.

Table of Content

❖ Our Company Profile	3- 9
❖ Our Team	10-15
❖ Our Business	16-18
❖ Our Product & Service	19-45
❖ Our Clients	45-46

Our Mission

Our mission is to create customer delight by delivering innovative technological solutions, precisely tailored to meet individual needs. By deploying top-tier talent, leveraging advanced technology, and fostering a collaborative environment, we aim to optimize costs and empower our customers to achieve their goals effectively.

Our Vision

Our vision is to establish ourselves as a global leader in IoT hardware solutions. Through pioneering in-house leadership and cutting-edge innovations, we aspire to become the preferred partner for all our customers. We are committed to exceeding expectations by delivering exceptional value, ensuring unparalleled reliability, and fostering long-term relationships.

Directors

Deep Hand Arora
Co-Founder & Director

Mr. Deep Hans Arora is a young Indian entrepreneur with a difference who believes in quality with pace. He is Co-founder and Director of JSD Electronics India Private Limited. He has graduated in Engineering and have 20+ years of Experience.

Simardeep Singh
Co-Founder & Director

Mr. Simardeep Singh graduated in Engineering in 2010 and has 15+ years of experience in Product Design & Manufacturing , and successfully delivering 35+ product types. He is a highly motivated visionary who is enthusiastic about new Technology

2G Telematics- GB140

The GB140 is an AIS140 Certified, resilient and compact vehicle tracking device, featuring multiple I/O ports and an IP65 casing for durability. With storage for up to 40,000 tracking records and 9-36 V power supply and its CAN & BLE capability extends functionality

Features

Power Input
Range 9-36V

Water and
Dust
resistance -
IP65

ROHS

Asset Tracker

Asset Tracker is a 4G GPS-based device designed to monitor and track the location, status, and sometimes condition of valuable physical assets in real-time. Device have 4G and 2G connectivity and strong magnetic base. 10,000 mAh Long battery life.

Features

BDS+GPS+LBS

Power Over Ethernet (PoE) Injector

POE - CBDP24151- PoE Injector CBDP24151 is a device. No need to buy a PoE switch, you can use the existing non-PoE switch or non-PoE router to connect PoE devices with the help of PoE devices. The main purpose of CBDP24151 is to provide PoE to outdoor telecom products such as Access Point, Radio etc. It is compliant with the EMI/EMC.

Features of PoE

Compliant with IEEE802.3af/at

Input Voltage Rang
AC (80-240 VAC)

PoE Extender

PoE Switches

PoE Switches

A PoE switch is a regular Fast Ethernet or Gigabit network switch that has Power over Ethernet functionality integrated. A Power over Ethernet switch both enables communication among network clients and provides power using the same RJ45 network cable to PoE-enabled edge devices, such as VoIP phones, network surveillance cameras or wireless access points.

Video Telematics

Video telematics combines AI-powered dash cams with telematics sensors, such as GPS receivers, engine interfaces and accelerometers. Together, they monitor driver behavior and vehicle performance and turn raw data into actionable insights. You see the full picture—from vehicle movements to identifying unsafe driving behaviors. The goal is to optimize fleet operations, plan efficient routes, save fuel, and schedule maintenance more effectively.

IoT(Internet of Things) Solutions

IoT solutions (Internet of Things solutions) refer to **systems or services** that connect physical devices (things) to the internet, allowing them to **collect, send, receive, and analyze data** — often in real time. These solutions enable automation, remote monitoring, and smarter decision-making in homes, industries, cities, and more.

Advantages

Real-time
data & alerts

Improved
safety and
maintenance

Automation of
tasks

Increased
efficiency

Cost savings
through data-
driven insights

Remotely
Control &
monitoring

IoT Gateway

An IoT Gateway is a device that connects Internet of Things (IoT) devices (like sensors, controllers, and intelligent field devices) to the cloud or a central data system. It acts as a bridge between the edge (field-level devices) and higher-level systems, enabling communication, data processing, and management.

Intelligent Field Device(IFD)

An intelligent field device is a type of equipment or sensor used in industrial automation systems that has built-in processing capabilities, enabling it to perform tasks like data collection, analysis, and communication with other devices or control systems without the need for a centralized controller. These devices typically use advanced sensing technologies, microprocessors, and communication protocols to monitor and control various parameters in real-time.

Advantages

Intelligent Field Device – Use Cases

Intelligent Field Device

Medical- NB IoT Gateway

Features

Use cases- Remote patient Monitoring System

- ❖ Blood Pressure Monitoring
- ❖ Weight Monitoring
- ❖ Pulse Oximeter reading
- ❖ Glucometer reading

Sleeping Disorder Device

Features

- ❖ Prevents Airways from Narrowing
- ❖ 100% Safe ,Natural & Non-Invasive treatment
- ❖ Effective for Preventing snoring & sleep apnea
- ❖ Easy to put on & comfortable to wear

Reverse Engineering

Reverse-engineering is the act of dismantling an object to see how it works. It is done primarily to analyze and gain knowledge about the way something works but often is used to duplicate or enhance the object. Reverse-engineering can be used to learn how something works and to recreate the object or to create a similar object with added enhancements

Features

Product Improvement

Cloning or Imitation

Interoperability

Completed Reverse Engineering Projects

Smart USB

This product cover all three protection range i,e Over voltage, under voltage and over load protection. In case of voltage fluctuations, the device instantly cut off the power supply. When supply is back to normal, the device automatically reconnect supply

DC UPS

Smart Power-Cut Solution : Power Plus provides battery backup for your router and other devices, keeping your Wi-Fi and internet connection stable. Keep your router, set-top box, and other devices running smoothly when your electric power cuts.
